URBAN TECH SWEDEN
in cooperation with Nordic Heat and The Heat Academy:

Workshop:
Affordable solutions for capturing and distributing low temperature

There is an urgent need to develop affordable small-scale district heating solutions based on low temperature heat sources. **At this workshop** we will do a thorough analysis of design, technologies available, installation-, maintenance- and operation costs and the existing commercial offer.

The discussion will be focusing on a selection of concrete heat projects currently underway in the UK. The aim is to explore the opportunities for engaging Swedish suppliers in a business innovation initiative to develop a competitive system solution targeting low temperature heat projects in the UK and beyond.

Agenda

- Detailed presentation of projects underway
  - **London-Transport for London-Underground Heat**
  - **Bridgend-Caerau-Mine Heat**
  - **Nottingham-D2Grids-Mine Heat**
- Review of main cost drivers
- Assess opportunities for cutting costs
- How to achieve cost reductions in practice
- Opportunities for collaboration on developing a bundled system solution
- Resources – applying for public funding to a business development project
- Preparing commercial workshops with project teams in Bridgend, London and Nottingham
- Priorities and next steps

For detailed information about the workshop please contact
Peter Anderberg pa@nordheat.eu

When: 19 November at 10-14, including lunch
Where: Näringslivets Hus Storgatan 19 (T-bana Östermalmstorg) Stockholm

Please RSVP to anna.liljestrand@tebab.se
