

HEAT ACADEMY

HEAT ACADEMY ONLINE

Decarbonising Heating. **Now.**

Friday 3rd April: 10.00 – 12.00 (GMT)

Cities are faced with a range of **converging emergences** – Climate, Energy Security, Jobs, Social Welfare...

Heating is a good place to start when tackling these challenges.

You are invited to an online master class offered by the Heat Academy at which we will address the broad range of benefits of decarbonising heating. The session is organised in collaboration with Stoke College, Bridgend College and CATCH in Grimsby.

The session is primarily aimed at senior decision makers currently engaged in developing strategies to respond to climate emergency – political leaders, business managers, property managers, investors – but obviously open to anyone having an interest in these topics.

Topics to be addressed at the session include:

- What are the basic options to decarbonising heating?
 - How to prioritise different opportunities?
 - Why critical to replicate and collaborate?
 - Why Heat Networks work?
- How to maximise the broader benefits of investments?
 - How to get going?

The session will involve speakers with long experience in developing and implementing strategies in decarbonising heating, in the UK and abroad.

To register, please send a mail to Peter Anderberg (pa@nordheat.eu) or Mark Woodward (mark.woodward@nordheat.eu)

The session is offered **free of charge**.
